

# ESPRUINO MDBT42Q BREAKOUT

# PINOUT

- Pins D9 and D10 are for connecting an NFC antenna and by default cannot be used as GPIO.
- Interface on all GPIO pins: 1xSPI, 1xUART, 1xI<sup>2</sup>C  
When power is first applied, the MDBT42Q checks if pin D8 is at 3.3V.  
If it is, it initialises the on-chip UART on D8 (RX) and D6 (TX) and puts the Esprino console on it at 9600 baud.
